after receiving this offer

World's First, Most Advanced and Widely Adopted cloud-based flash tuning platform

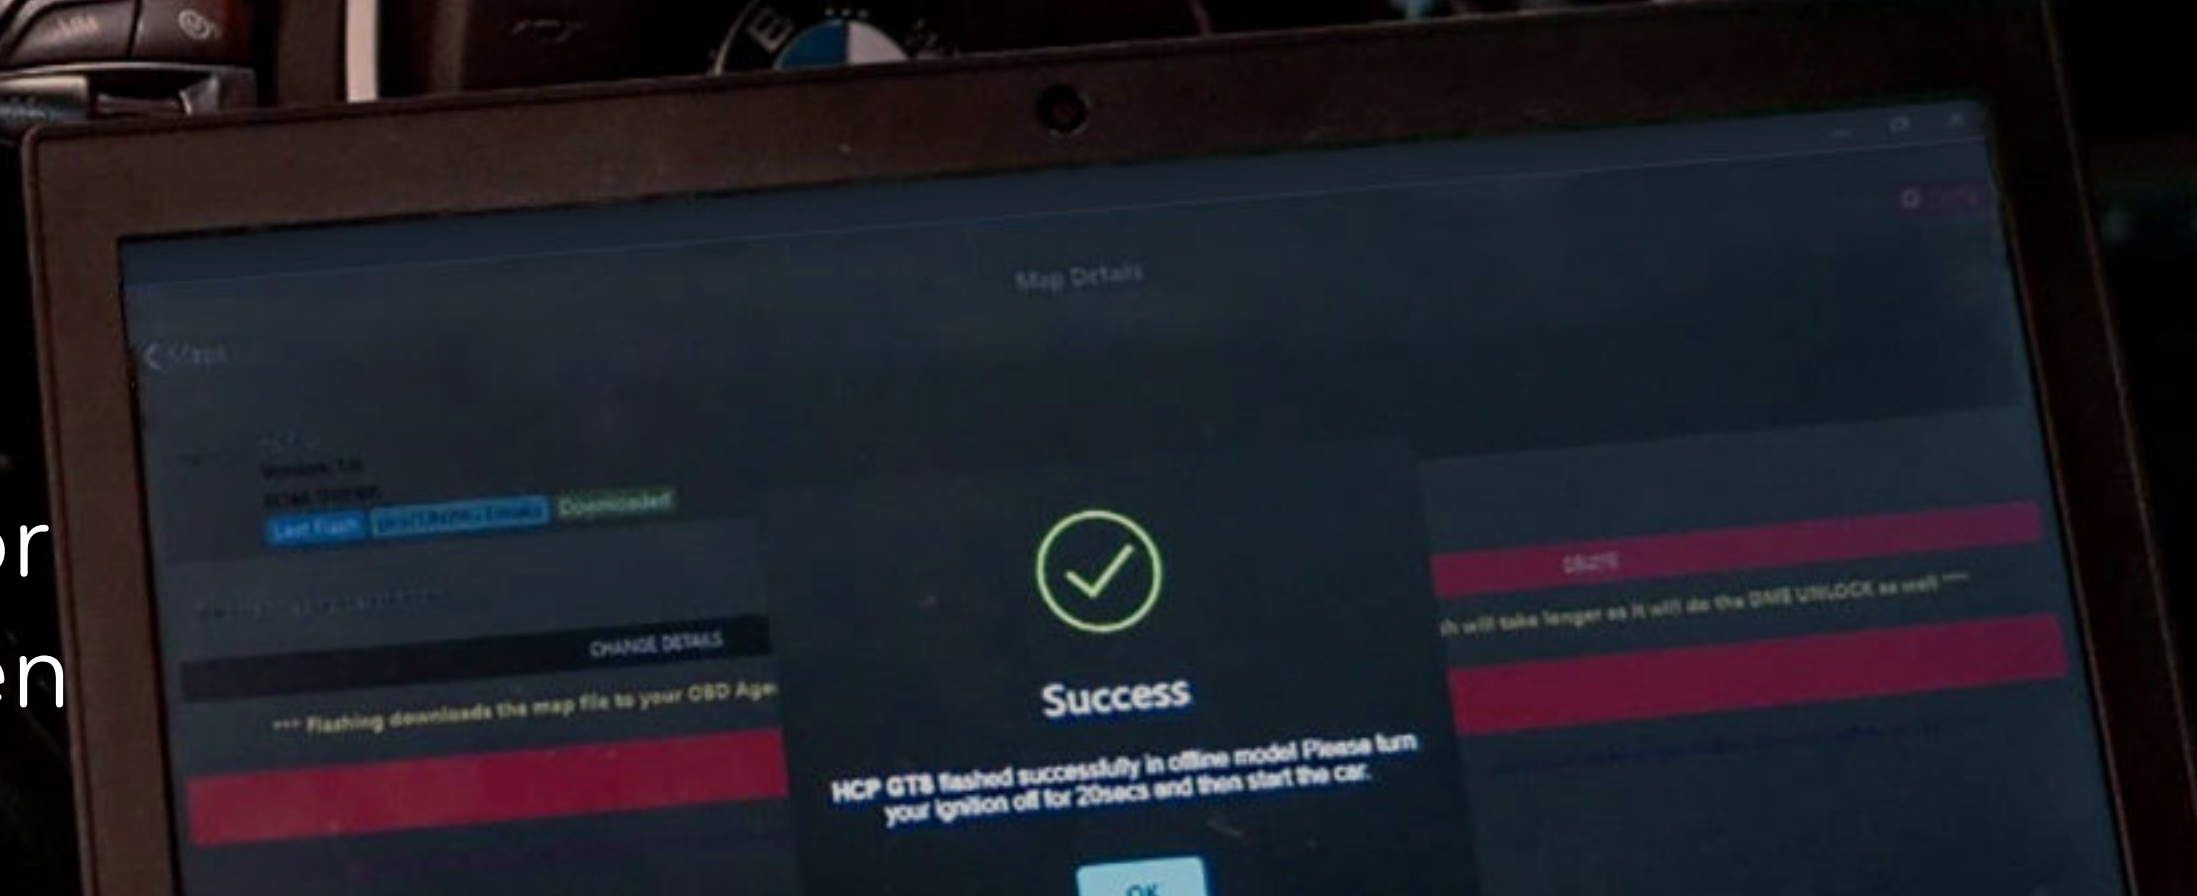

Build the ultimate tune for your vehicle

And go from stock to full race calibration, and everywhere in between, with a map switch in the provided mobile app. bootmod3 calibrates the factory vehicle modules over the OBD port in a matter of minutes in the convenience of your driveway or anywhere internet access is available.

4800+ tuning tables

Available on S55 CustomROM (1000s for other vehicle models) for tuning between

Throughout our recent tuner beta to make things as efficient as possible for them and their customers when tuning remote and in-person on-dyno vehicles

○ Thousands of tables available for any existing non-CustomROM maps

○ New Ability to import across different engine types along with previous cross ROM import

New Table Editing Math Functions:

Horizontal, vertical, and 4-way interpolation smoothing functions added based on WinOLS interpolation behavior

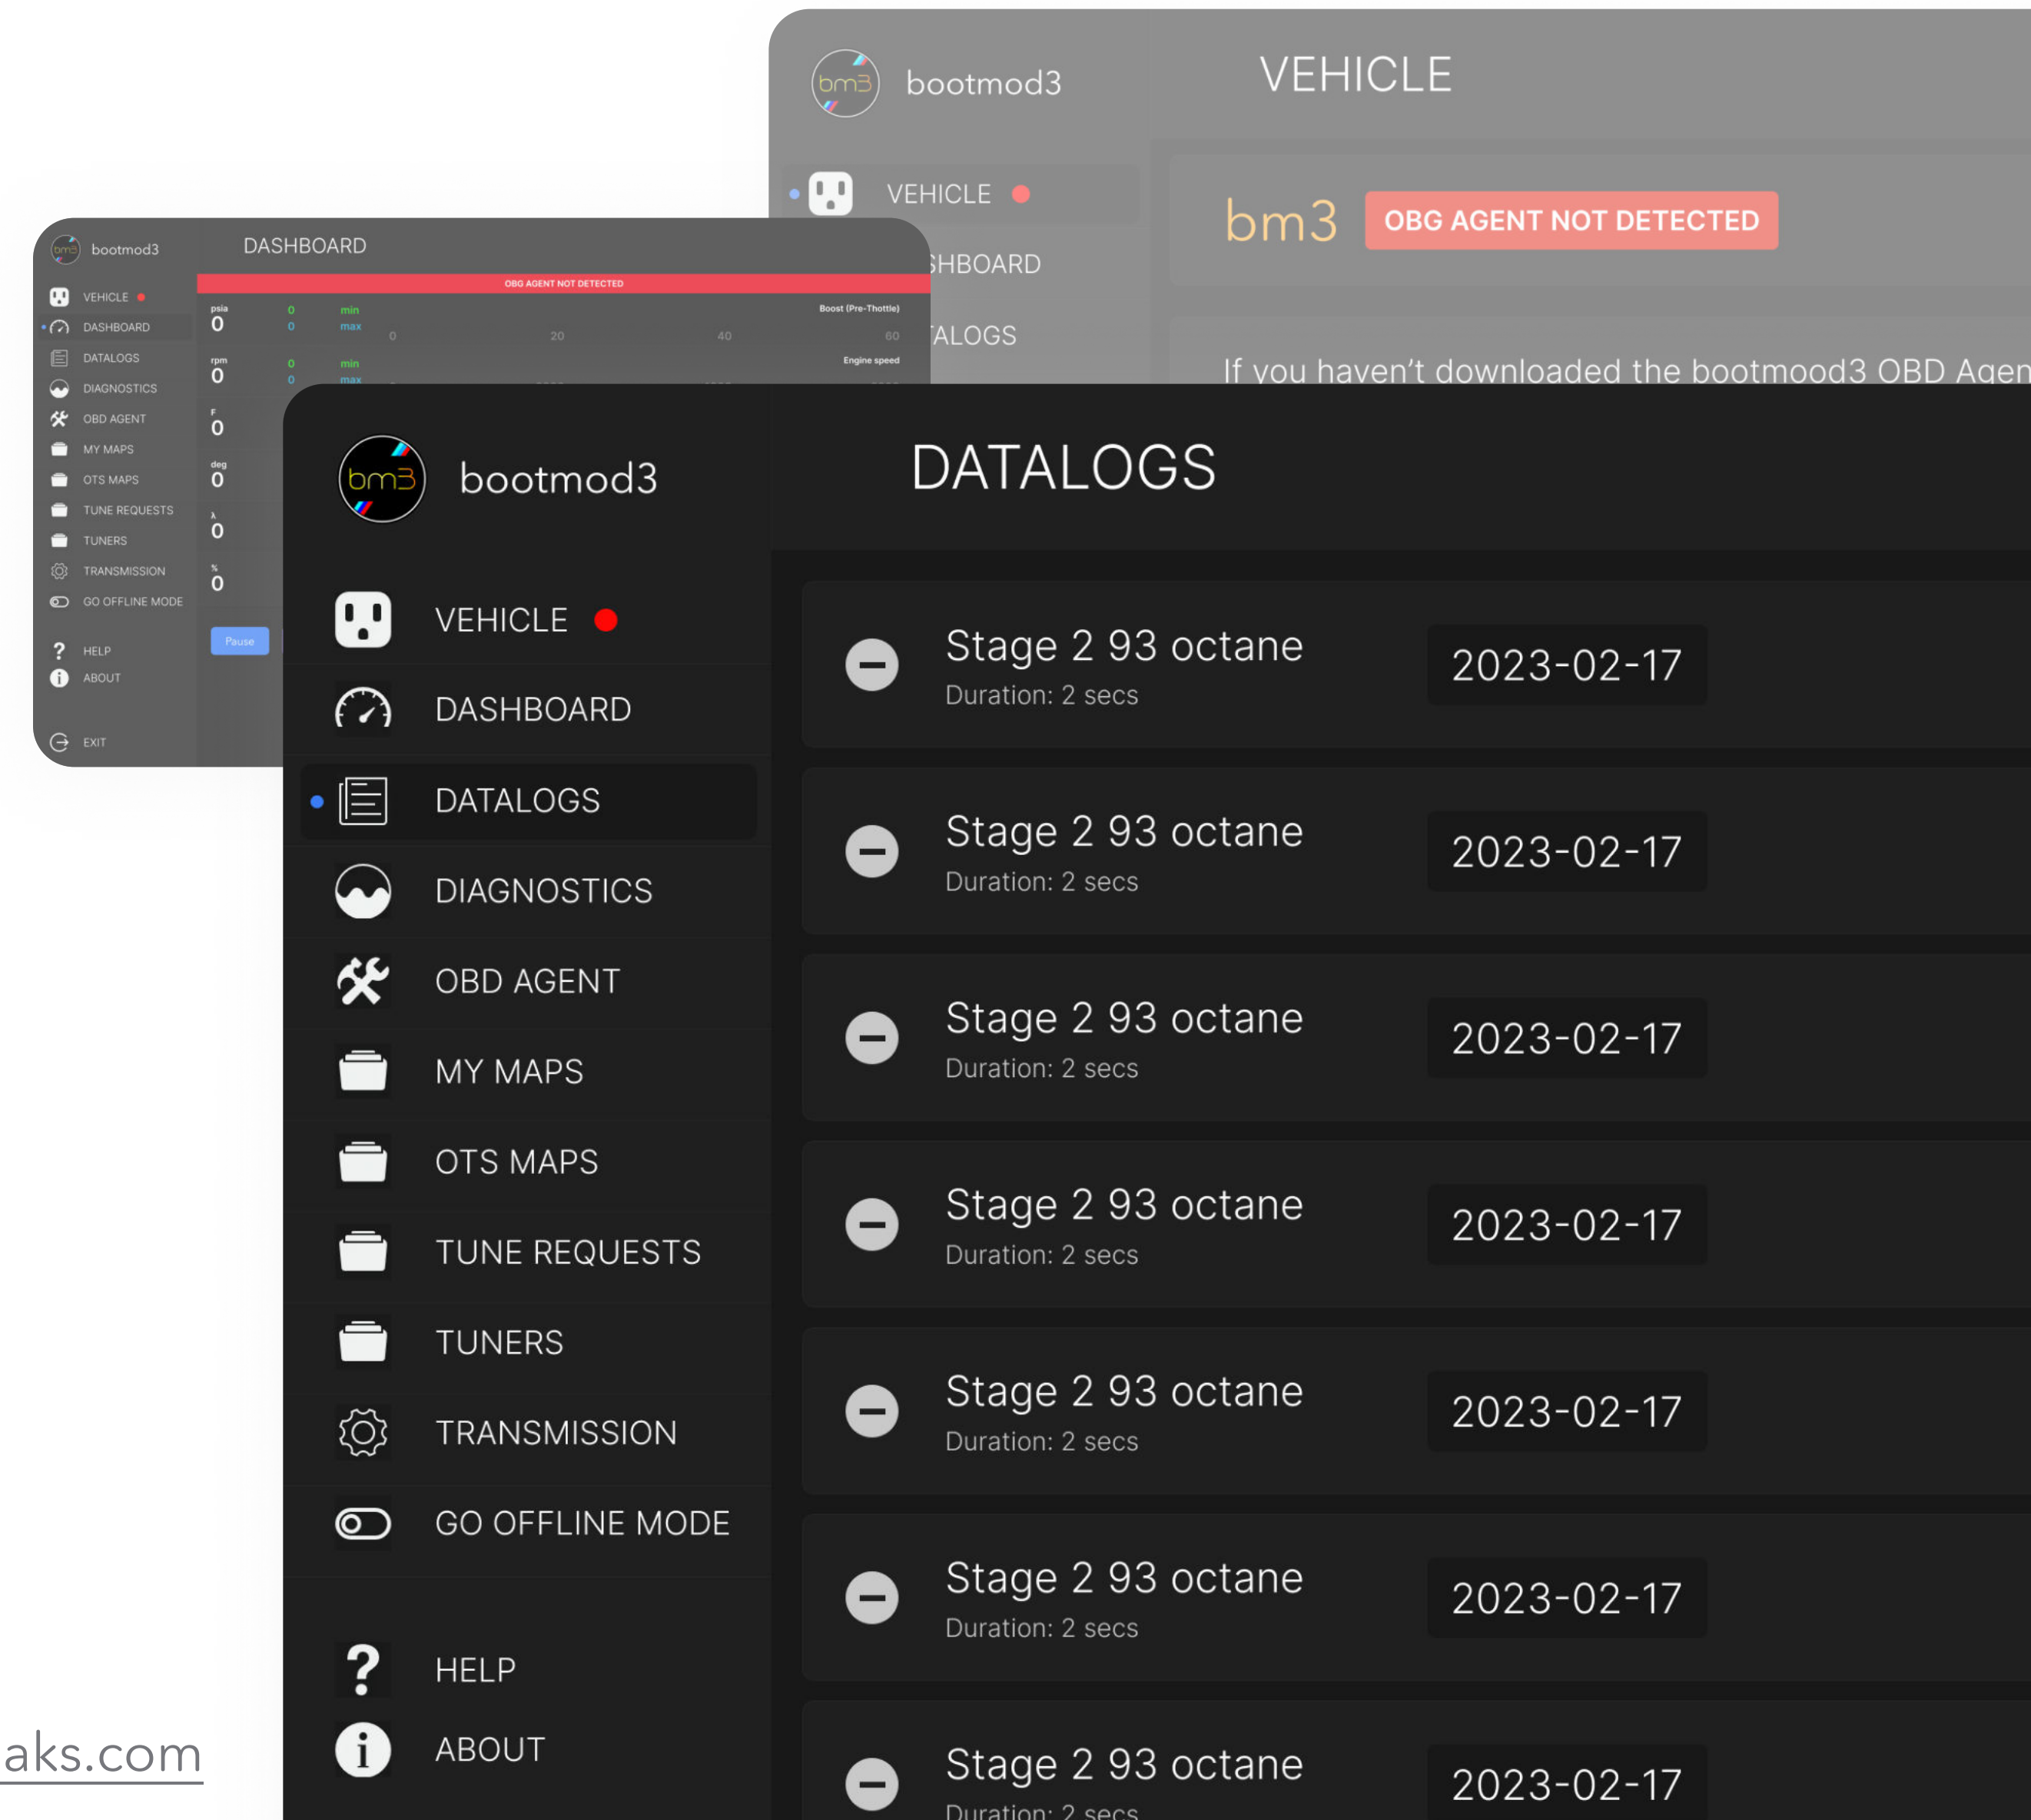

▲▼ Increment/Decrement by smallest factorable unit

▲▼ Increment/Decrement/Multiply/Divide by value entered in cell

bootmod3 offer many unique features not found in any other flash tune including and currently available:

- ✔ One OTS map/tune included with the purchase and any other maps labeled as "FREE"
- ✔ Datalogging hundreds of diagnostic channels, up to 70+ channels concurrently with the highest throughput and sample rates available
- ✔ GTS/CS Transmission Flash INCLUDED for DCT equipped vehicle
- ✔ Reverting back to stock performance map and re-locking the DME to stock programming
- ✔ Live Dash - realtime vehicle parameter monitoring via in-app gauges
- ✔ Reset learned adaptations (octane, knock, Valvetronic, etc)
